

Why isn't plastic water at the Dance?

Plastic water bottles are porous. Porous means that the plastic can come out of the water bottle and into your drinking water. If the plastic water bottle was heated on a loading dock, hot storage room, or any other hot place then the transfer of plastic into your water happens much quicker. If the water bottle is reused, the transfer of plastic into your drinking water happens faster because the plastic water bottle is old. When the bottle is old, it becomes softer than when you first used it. The sign of a soft, plastic water bottle is a sign you are drinking plastic.

GUYS:

Have you ever wondered why there are so many Viagra commercials on television lately? Plastic leeching into the water may be a contributing factor. BPA or bisphenol A is the name of the plastic material in the water bottle. BPA is not healthy for your body to absorb. Your body will interpret BPA as estrogen. Guys, estrogen is a woman's hormone. When men drink a woman's hormone, it hurts their performance in the bedroom. A swollen prostate is caused by eating & drinking from plastic food containers.

LADIES:

Have you ever wondered why women are always on a diet and cannot lose weight? Plastic leeching into the water may be a contributing factor. BPA or bisphenol A is the name of the plastic material in the water bottle. Your body will interpret BPA as MORE estrogen. More estrogen gives women the ability to have round curves that men like. Only problem, when a woman has too much estrogen, they begin to find it impossible to lose weight. Too much estrogen is also a contributing factor to hot flashes, night sweats, endometriosis, PMS, clotting periods and many more women health problems.

MOTHER EARTH:

When plastic breaks down, it resembles plankton. Plankton is smaller than humans can see, but fish see it as FOOD! The fish and other sea life eat the poison and slowly become sick and die!

SOLUTION:

Drink water that is contained in glass. Never drink out of aluminum. The best alternative is to transfer reverse osmosis water from home into a stainless steel container. It's cheaper than plastic bottled water and it's much healthier for you and the planet. Tell your friends on FaceBook to avoid plastic water bottles.
